

### Conditional Orders – Let our AlgoTrader monitor the market for you

eBroker offers various types of conditional orders which can help your investors to monitor the stock market actively and place orders at the desired moment electronically. Just give your orders to our AlgoTrader to have your job done at the desired timing!

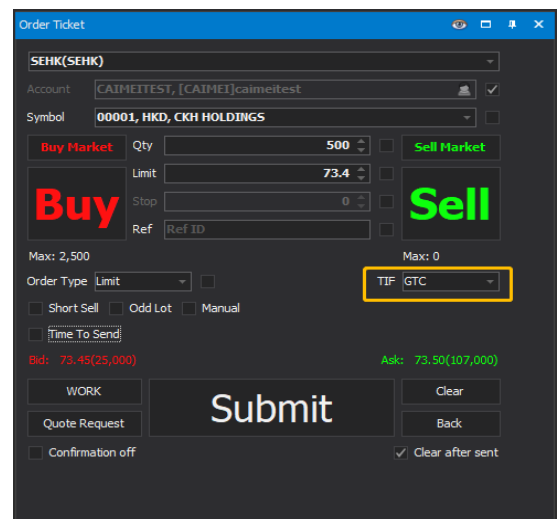

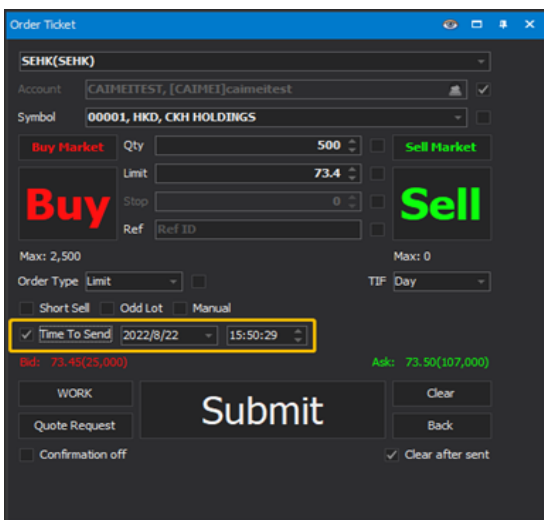

#### ● Scenario 1: Preset Timing

##### Time condition: Time to Send

You can specify the order details and the exact time for the order to be sent out to market

##### Time Condition: Good till cancel

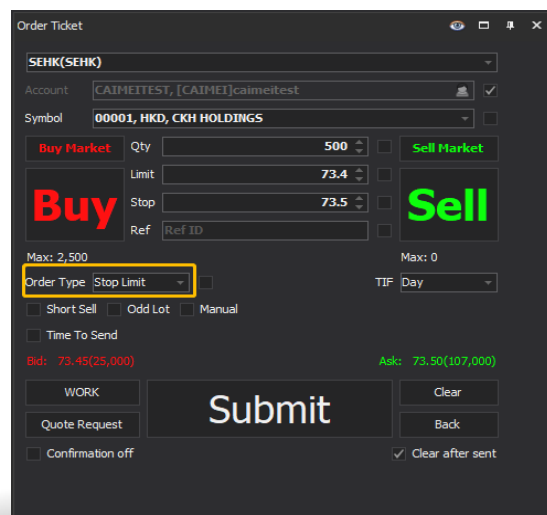

Your order can be kept in the market for 90 days (can be predefined) until cancelled or fully filled

#### ● Scenario 2: Stop Loss or Lock in Profit based on your Market View

##### Condition: Stop Limit Orders

Place an order with a stop price and a limit price. Once the stop price is reached, the order will be activated to the market to either lock in a profit or stop loss at a preset level depending market direction.

### ● Scenario 3: Stop Loss or Lock in Profit in a volatile market

#### Condition: Bull and Bear

You want to do day trade but the market is so volatile. How about setting a combo order – once you have bought the shares at a preset price, the loss will be stopped if the market goes down or lock in profit if the market goes up?

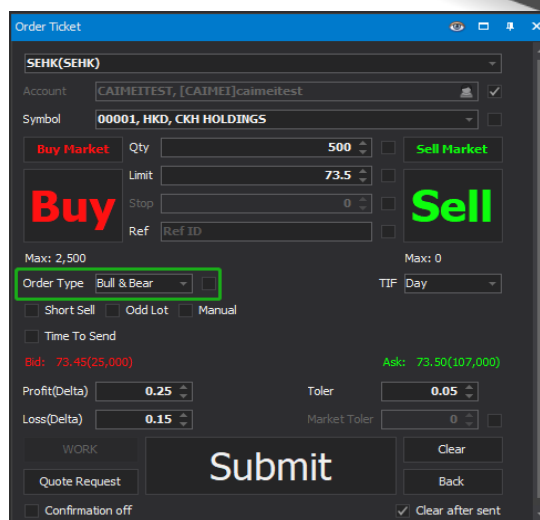

### ● Scenario 4: Strategic Orders

Looking to set more sophisticated strategies or write your own strategies?

How about using our One activate others orders (OAO) or One Cancel others orders (OCO) or a combination of both?

You can use this for pair trading on highly correlated stock or ETF, or for same stock.

Get more info on our AlgoTrader program which allows you to write your own strategies using market data parameters such as SAR.

- ❖ A Bull and Bear Combo consists of a buy limit order and two sell stop limit orders.
- ❖ The sell order will only be activated once the buy order has been fully filled. (OAO)
- ❖ The two sell stop limit orders are conditional One cancel other (OCO) orders. Either one will be activated to be sent out to market when conditions are reached and the other one will be cancelled when the one has been fully filled.

Just sit back and let our AlgoTrader do the job for you!
