

SMART ORDERS WITH REAL-TIME MARKET MONITORING

LET OUR SYSTEM DO THE HARD WORK FOR YOU!

eBroker is now launching smart order types across all trading platforms to enable investors to capture market opportunities in real-time.

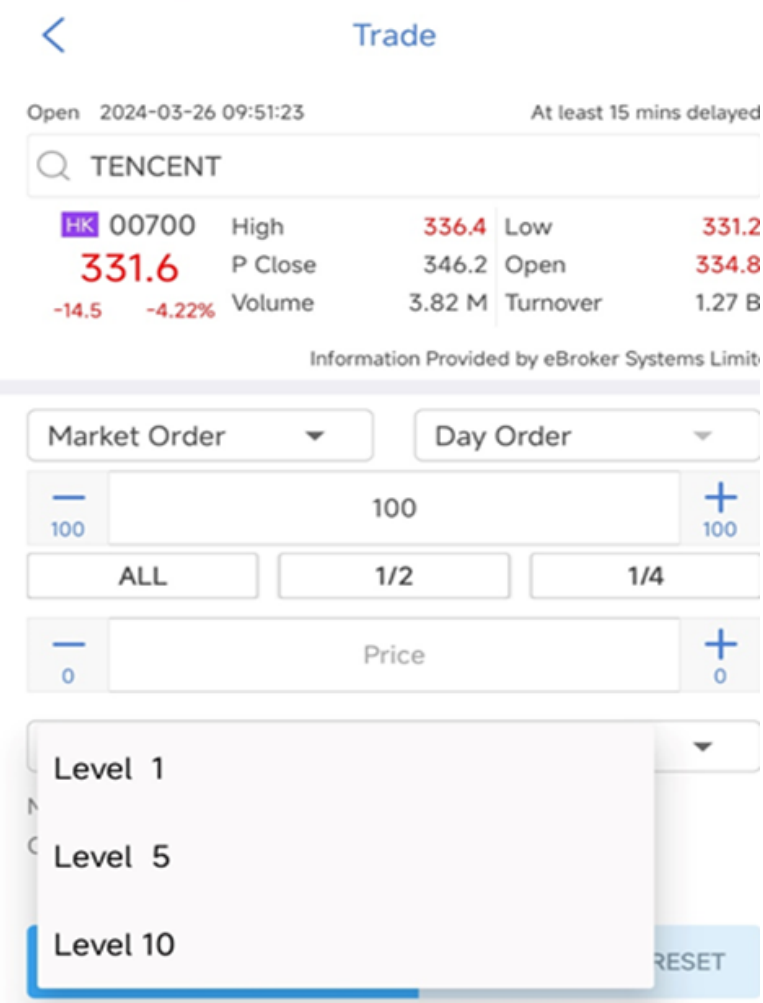

With just some simple preset parameters, investors can now implement their own investment strategy without having to monitor the market closely.

SMART ORDER HIGHLIGHTS:

1. Market Order with Aggressive Level Setting

Investors can now place market orders with higher aggressive levels, increasing the likelihood of order fulfillment in a fast-moving market.

- Fast order placement, no need to specify price
- Flexible aggressive Level setting

2. Trailing Stop Limit Order

System will dynamically calculate and adjust the trigger price and order price based on preset conditions to follow real-time market fluctuations and automatically place the order when the take-profit (or stop-loss) point is triggered.

- Auto place order when preset conditions are met
- Real-time market monitoring to auto adjust prices

BUY Buy/Sell RESET

3. Advanced Bull & Bear Orders

A set of take-profit and stop-loss OCO orders will be triggered once the initial order has been executed. System will automatically place the corresponding order according to different market fluctuation scenarios.

- Real-time market monitoring to place the correct preset order for investors
